EDUCATION

Software Engineering Technology – Artificial Intelligence, Advanced Diploma

Centennial College, Toronto, ON

Sept. 2023 – Dec. 2026

GPA: 4.312/4.5 (A+)

Relevant Coursework: AI/ML, Data Structures & Algorithms, Object-Oriented Programming, Big Data Tools, Software Testing & QA, Software Development Life Cycle.

SKILLS

Programming Languages: Python, Java, C++, JavaScript, Node.js, object-oriented design and analysis

Backend, Containers & Cloud: FastAPI, Flask, Docker, Express.js, AWS, Azure, Firebase, SQL, MongoDB

Tools & Machine Learning: Git/GitHub, Scikit-learn, XGBoost, SHAP, Pandas, Gradio

Engineering Practices: Unit & Integration Testing, TDD, Agile/Scrum, code review, log-driven debugging

PROJECTS

TabPFN on Classical Tabular Datasets | Python, TabPFN, Scikit-learn, XGBoost, SHAP, FastAPI, Docker, Gradio

- Deployed trained models behind a FastAPI backend, containerized with Docker, with a Gradio interface for live predictions.
- Benchmarked a Prior-Fitted Network (TabPFN) transformer against Logistic Regression, Random Forest, and XGBoost on tabular classification tasks.
- Computed feature importance and SHAP values to explain model predictions and compare interpretability across approaches.

Live Aquaria | JavaScript, React.js, Three.js, Node.js, Express, MongoDB Atlas

- Designed a scalable backend using OOP principles and integration testing, orchestrating Google's Gemini API for real-time species identification and validating AI outputs before surfacing to users.

KSI Accident Prediction | Python, Flask, Scikit-learn, Pandas, Matplotlib

- Performed data cleaning, preprocessing, and feature selection on the KSI accident dataset to prepare it for model training.
- Trained and evaluated predictive models for accident risk classification using object-oriented Python design, applying feature engineering to improve reliability.

EXPERIENCE

Content Developer Intern (Media Developer Co-op), Pearson, Toronto, ON

May 2026 - Aug. 2026

- Built and validated AI-powered learning modules for Pearson's enterprise-wide AI initiatives, applying structured QA/QC test cases to catch defects before release.
- Translated content and compliance requirements from stakeholders into functional course components and coordinated testing and sign-off across learning platforms.

Web Developer, ARIES, Toronto, ON

Jan. 2026 – Present

- Develop a scalable React and Node.js web application to automate workflow tracking for a manufacturing client, writing unit tests to validate core logic before deployment.
- Integrate Firebase backend services and deploy to Vercel using version-controlled Git workflows.

Business and IT Architecture Analyst (Co-op), Centennial College, Toronto, ON, rehired

Jan. 2025 – Dec. 2025

- Documented enterprise workflows through business process mapping and conducted gap analyses to recommend IT process improvements, escalating complex issues to senior stakeholders.

Frontend Developer, WIMTACH, Centennial College, Toronto, ON

May 2025 – Aug. 2025

- Built and deployed AWS-based front-end applications, debugging defects using structured, log-driven techniques.
